ExecuteArray

```java
public static native java.lang.Object executeArray(
    java.lang.String[] command)
```

Runs a Redis command. It accepts an array of strings, which represents the command to execute.

**Parameters**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>command</td>
<td>array of strings</td>
<td>A Redis command</td>
</tr>
</tbody>
</table>

**Returns**

Returns the command result. It could be a string or an array of strings, depending on the command.

**Example**

```java
GearsBuilder.executeArray(new String[]{"SET", "age:maximum", "100"});
```
