RedisJSON 1.0 release notes

Requirements
RedisJSON v1.0.8 requires:

- Minimum Redis compatibility version (database): 4.0.0
- Minimum Redis Enterprise Software version (cluster): 5.0.0

v1.0.8 (August 2021)

This is a maintenance release for version 1.0.

Update urgency: LOW - No need to upgrade unless there are new features you want to use.

Details:

- Enhancements:
  - #257 Support inter shards TLS capability

- Bug fixes:
  - #282 Change JSON.DEBUG first key index to 2

v1.0.7 (December 2020)

This is a maintenance release for version 1.0.

Headlines:

- This release improves overall stability and provides fixes for issues found after the previous release.

Details:

- #222 Validate path is not empty.
- #253 NULL de-reference after error.

v1.0.5 (September 2020)

This is a maintenance release for version 1.0.

Headlines:

- This release improves overall stability and provides fixes for issues found after the previous release.

Details:

- Enhancements:
  - Republish docker image based on Redis 6
Bugfixes:

- #200 Following a call to JSON.ARRPOP and JSON.STRAPPEND, the LRU cache should be invalidated.

**v1.0.4 (February 2019)**

This release updates the version to 1.0.4.

**v1.0.3 (12 September 2018)**

This release disables the cache by default, and allows an explicit `CACHE <ON | OFF>` module argument to enable it.

**v1.0.2 (10 September 2018)**

This release contains some bug fixes over 1.0.2. It also includes some ci changes as well.

**v1.0.1 (December 2017)**

This version provides a serialization cache for JSON.GET (when used with the default parameters). The cache policy is LRU (last recently used), and extremely small items are not cached.

In the future, options may be added to configure the cache, but for the time being the cache is intended to be small and transparent.
