RDBTools v0.9.36, March 2019

New features

- Added the Streams tool The new Streams tool has landed in this release, a specialized browser tool to work specifically with the new Stream data type added in Redis 5.0.

- Batched updates and multi-node updates in Configuration tool New it's possible to group multiple configuration changes together and push them in one batch. Also, the batch of changes can be pushed to multiple nodes in the cluster, making it super easy to change configuration in cluster nodes.

Bug fixes

- Fixed ElastiCache auto-discovery
