RedisInsight v1.7, September 2020

1.7.1 (October 2020)

Maintenance release for RedisInsight 1.7 including bug fixes and enhancements.

Headlines:

- Core:
  - New public health-check API to make monitoring deployments easier.
  - Display progress information during memory analysis.

Full details:

Enhancements and bug fixes

- Core:
  - Fixed support for TLS in Redis Cluster databases.
  - Application name is properly capitalized on MacOSX.
  - Fixed update notifications on Docker - Now links to Docker Hub page and provides instructions for updating.

- Memory Analysis:
  - Information about the current stage of analysis is now displayed while the analysis runs.
  - Fixed issue with running Memory Analysis on MacOSX (related to system OpenSSL libraries).

- Browser:
  - Visual improvements to key details view to improve the experience working with long key names.

- CLI:
  - Improvements for Redis Cluster databases - Controls to target specific nodes, all nodes, only masters/replicas, etc.

- Streams:
  - Fixed consumer groups functionality on Redis Cluster databases.

- Telemetry:
  - Report specific modules even when the MODULE LIST command is not available.

1.7.0 (September 2020)

Headlines:

- Support for RediSearch 2.0

Full Details:

- Core:
  - Added explanation of the supported subscription types for Redis Enterprise Cloud database auto-discovery.
  - Fixed a bug where upgrading from some previous versions would give an error on startup.
  - Use a non-root group by default for the RedisInsight Docker container.

- Memory Analysis:
- Improved UI for offline analysis via RDB file stored in S3.
- Fixed bug where using RDB stored in S3 sub-folder would fail.

- Browser:
  - Improved support for searching members of large collections (hashes, sets and sorted sets).

- Streams:
  - Improved UX for the handle to resize key selector.

- RediSearch:
  - Fixed support for Redis Enterprise Cloud Essentials databases.

- RedisGraph:
  - Fixed an issue where localstorage is filled with unnecessary data.

- Analytics:
  - Reporting the subscription type for auto-discovered Redis Enterprise Cloud databases.
