RedisInsight v1.9, January 2021

1.9.0 (January 2021)

This is the General Availability Release of RedisInsight 1.9 (v1.9.0)!

Headlines:

- RedisGraph tools is getting improved with better UX and new interactions capabilities
- Adding the ability to configure a database, by just using its direct URL to auto fill all required fields
- CLI is now providing ability to configure your favorite key-bindings between Emacs or Vim

Full Details:

- Core:
  - Support for configuration of Redis where the number of databases goes over the default 16.
  - Ability to add a Redis database using a shareable URL.

- RedisGraph
  - UX improvements for large queries: fixed long pause while results are being rendered.
  - Made various improvements to interactions with the graph visualization:
    - Selected node’s size increased to make it easier to distinguish.
    - Zoom via mouse wheel.
    - Double click to zoom in.
    - Double right-click to zoom out.
    - Keyboard shortcuts to zoom.
    - Center on node on fetching direct neighbours.
    - Halo masking indirect edges on selected node.
    - Button to reset view: center entire graph.
    - Button to center on the selected node.
    - New zoom buttons

- CLI
  - Basic navigation key-bindings for Emacs and Vim.
  - UX improvements: the inputs and other controls are now disabled and a message is shown while the command is executing.
