Automatically Discovering Databases

RedisInsight lets you automatically add Redis Enterprise Software and Redis Enterprise Cloud databases.

Note: For Redis Cloud, auto-discovery is supported only for Flexible or Annual subscriptions.

Auto-discovery for Redis Software

To automatically discover and add Redis Software databases to RedisInsight:

1. In RedisInsight, select ADD REDIS DATABASE.

2. Select Automatically Discover Databases.
3. Select Redis Enterprise.

4. Enter the connection details and then select DISCOVER DATABASES.
5. From the list of databases, choose the databases that you want to add and then select **ADD SELECTED DATABASES**.

All of the databases that were successfully added are displayed on the screen. To see the databases in the **Databases** page, click **VIEW DATABASES**.

**Auto-discovery for Redis Cloud databases**

To automatically discover and add Redis Cloud databases to RedisInsight:

1. In RedisInsight, select **ADD REDIS DATABASE**.
2. Select **Automatically Discover Databases**.

3. Select **Redis Enterprise Cloud**.
4. Enter the **Account Key** and the **Secret key** associated with your Redis Cloud subscription and then select **SUBMIT**.

5. Verify the details for the account:
   - If the account details match your account, select **MY SUBSCRIPTIONS** to list the subscriptions in your account.
   - If the account details do not match your account, select **NOT MY ACCOUNT** and then verify the credentials.
6. Choose the subscriptions that contain databases to be added to RedisInsight and then select **SHOW DATABASES**.

7. From the list of active databases in the selected subscriptions, choose the databases to be added to RedisInsight and then select **REGISTER DATABASES**.
When successfully added, databases are displayed on the screen. If all databases are added successfully, the message *All selected databases added successfully* is displayed.

8. To see the automatically discovered databases in the **Databases** page, select **VIEW DATABASES**.
